

DAVID DADA

Full-Stack Software Engineer | Backend Specialist

daviddada360@gmail.com • +234 916 280 5324 • Lagos, Nigeria • github.com/Dayvhiid

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 2–4 years of hands-on experience building scalable, production-grade web and mobile applications. Specialises in PHP/Laravel backends, Node.js APIs, and React-based frontends. Delivered real-world systems spanning student transportation logistics, healthcare data management, and secure payment integrations. Recently selected for the inaugural Saby Fellowship (Claude Certified Architect track) — demonstrating a commitment to mastering cutting-edge AI and software architecture. Holds CISCO Cybersecurity and Linux Administration certifications. Actively seeking mid-to-senior engineering roles where deep technical expertise meets product impact.

TECHNICAL SKILLS

Languages: PHP, JavaScript (ES6+), Python, SQL

Frameworks: Laravel, Node.js, React, React Native (Expo)

Databases: PostgreSQL, MySQL

API & Integrations: REST APIs, OAuth 2.0, Webhook design, Payment gateway integration

DevOps & Infra: Linux Administration, Git/GitHub, CI/CD, Bash scripting

Certifications: CISCO Cybersecurity (CCT), Linux Administration

AI & Tooling: Claude API, Model Context Protocol (MCP), Anthropic ecosystem

WORK EXPERIENCE

Claude Certified Architect Fellow | [Saby Fellowship](#)

Apr 2026 – Present • Remote

- ▶ Selected for the inaugural cohort of the Saby Fellowship, a competitive AI engineering programme focused on the Claude ecosystem and Anthropic AI tooling.
- ▶ Completing advanced modules in Model Context Protocol (MCP), Claude Code, and API integration, dedicating 10–12 hrs/week across a structured five-week curriculum.
- ▶ Developing production-ready AI-powered skills and agent workflows using the Claude API, positioning for roles as a Claude Certified Architect.

Freelance Full-Stack Developer | [Independent / Contract](#)

2022 – Present • Lagos, Nigeria

- ▶ Designed and shipped Kampus Rides — a full-featured student transportation platform built with Laravel and integrated real-time GPS tracking, route optimisation, and a secure payment system serving Babcock University's campus community.
- ▶ Architected OptiCare — a healthcare management platform enabling multi-role workflows (admins, doctors, patients), appointment scheduling, and secure patient data management with role-based access control.
- ▶ Implemented OAuth 2.0 Authorization Code Flow for a React Native/Expo mobile app using GitHub as the identity provider, resolving complex redirect URI matching across dev and production environments.
- ▶ Integrated third-party payment APIs and webhooks with idempotency logic to prevent double-spend and duplicate event processing in wallet-based systems.
- ▶ Applied to and cleared technical screenings for Full-Stack PHP Developer roles, demonstrating deep knowledge of system design, concurrency, and production constraints.

EDUCATION

B.Sc. Software Engineering

2020 – 2024

Babcock University, Ilishan-Remo, Ogun State, Nigeria

- ▶ Completed final-year project defence (Nov 2024); coursework spanning data structures, system design, database engineering, and software architecture.
- ▶ Active focus on backend systems, API design, and production-quality engineering practices throughout the programme.

KEY PROJECTS

Kampus Rides — Student Transportation & Logistics Platform

- ▶ Built with PHP (Laravel) + PostgreSQL; real-time GPS tracking via WebSocket, integrated payment gateway with idempotent transaction handling.
- ▶ Features include driver dispatch, route management, rider booking, and admin dashboard — designed to handle concurrent requests reliably.

OptiCare — Healthcare Management Platform

- ▶ Multi-role web application (Laravel/Node.js backend) handling appointment scheduling, EHR-style patient records, and provider workflows.
- ▶ Implemented robust data validation, RBAC, and audit logging to meet healthcare-grade data integrity standards.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- ▶ CISCO Cybersecurity Essentials (CCT) — Networking security fundamentals, threat detection, vulnerability management.
- ▶ Linux System Administration — Server management, shell scripting, process control, and file system administration.
- ▶ Saby Fellowship: Claude Certified Architect — In progress (Apr–May 2026) covering MCP, Claude Code, and AI API integration.
- ▶ DataCamp Data Engineering pathway — Actively upskilling in data pipelines, SQL optimisation, and distributed data architecture.

ADDITIONAL INFORMATION

Languages: English (Fluent)

Interests: AI engineering, open-source contribution, system design, cloud architecture

Availability: Open to remote and Lagos-based opportunities; relocation considered
